Frontend Developer with 3+ years of experience building production applications with React, Next.js, and TypeScript. Experienced in real-time messaging, AI-powered workflows, and complex CRM interfaces. Skilled in server-side rendering, performance optimization through caching and memoization, API integration, and automated testing with Playwright.

Professional Experience

Frontend Engineer | c10r.io - Business Management SaaS Platform | Jan 2025 - Present

- Integrated three external messaging channels into the CRM, enabling users to connect messaging channels to their workspace, manage two-way customer conversations in a unified interface, and configure automated AI replies.
- Improved time to first usable content on a core CRM page by 45% (2.0s → 1.1s) by replacing sequential data fetching with prioritized parallel requests and progressive rendering with loading states.
- Built a real-time inbound-message notification system over Socket.IO, delivering a stacked toast-queue UI across 6 channels to cut sales-team response time.
- Improved chat module performance by centralizing data fetching and eliminating duplicate requests across components, reducing page load time by 40%.
- Implemented Playwright E2E automation for the critical real-time notification flow and component tests for core notification behavior, including stacking, deduplication, and channel-specific formatting.

Frontend Engineer | A-Fix Inc. - Internal CRM platform | Jun 2023 - Dec 2024

- Streamlined application initialization by integrating a unified endpoint developed with backend engineers into a typed React Context, cutting startup API calls from 4 to 1 and enabling new components to reuse shared data without additional fetching logic.
 - Built a global quick-create launcher - a single entry point to create 7 entity types, opening each entity's form in a right-side slide-over, gated by per-entity permissions.
 - Standardized search across views by implementing debounced live filtering with URL synchronization, preserving search state across reloads and browser navigation.
 - Built reusable auto-save hooks for form and UI state, with debounced localStorage persistence, restore prompts, and automatic three-day expiration.
 - Improved mobile usability of an internal CRM by replacing dense tables with responsive contact cards, implementing touch-friendly interactions with accessibility improvements guided by WCAG, and ensuring cross-browser compatibility.
-

Skills

Programming: JavaScript, TypeScript, SQL

Frontend: React, Next.js, HTML, CSS, Tailwind CSS

APIs & Realtime: REST APIs, Socket.IO, WebSockets

State Management & Data: Redux Toolkit, Zustand, TanStack Query, PostgreSQL, MongoDB

Tools & Platforms: Git, GitHub, GitLab, Cloudflare, Vercel, Webpack, Vite, CI/CD

Testing: Jest, React Testing Library, Playwright

Web Performance & SEO: Core Web Vitals, Lighthouse, Google Search Console

Education

Bachelor of Science in Computer Science - Simon Kuznets Kharkiv National University of Economics - June 2020
