Mykyta Zubov

Seattle, WA | LinkedIn | GitHub | mykyta.zubov.dev@gmail.com

Frontend Engineer with 3+ years of experience in React, Next.js, and TypeScript, building B2B SaaS platforms and internal CRM systems. Built interfaces for 10+ third-party integrations and developed workflows for order intake, scheduling, and customer communication. Focused on mobile UX, accessibility, and performance – improved load times by up to 45%.

Professional Experience

Frontend Engineer Jan 2025 – Present

Kompot.ai – AI-powered Business Management Platform

- Built the frontend for **10+ third-party** integrations spanning telephony, payments, omnichannel messaging, email, and AI providers (Anthropic, OpenAI, OpenRouter), powering the paid tier of a platform serving hundreds of small and medium-sized businesses.
- Owned a cross-stack refactor of a messaging integration across ~70 files, standardizing identifiers across API contracts, validation, and UI; shipped an automatic per-tenant MongoDB migration with zero downtime.
- Improved chat module performance by centralizing data fetching and eliminating duplicate requests across components, reducing page load time by **30%**.
- Wrote Playwright E2E and regression tests for shipped features, contributing **20%** of the regression suite and adding coverage for production bugs to prevent recurrence.
- Reduced time to first usable content on the Contact page by **45% (2s to 1.1s)** by replacing sequential data fetching with prioritized parallel requests and progressive rendering with loading states.

Frontend Engineer Jun 2023 – Dec 2024

A-Fix Inc. – Internal CRM platform

- Built a pre-visit customer questionnaire with photo and video uploads, accessible via a public link, enabling technicians to assess issues before arrival and reducing work order completion time by **30%**.
- Streamlined application initialization by integrating a unified endpoint developed with backend engineers into a typed React Context, cutting startup API calls from **4 to 1** and enabling shared data reuse across components.
- Implemented the frontend for an order intake workflow processing **~5,000 service orders** per month, enabling managers to review incoming provider orders and move them into scheduling from a single screen instead of a manual process.
- Developed a shared React + TypeScript component library of 30+ components (tables, forms, modals, filters, file upload) and shared Tailwind utilities, reused across all CRM modules, reducing style duplication and cutting UI development time for new features by **~20%**.
- Redesigned mobile UX by replacing dense tables with responsive cards, adding touch-friendly interactions, WCAG-aligned accessibility improvements, and list virtualization for large datasets.

Skills

Programming: JavaScript, TypeScript
Frontend: React, Next.js, HTML, CSS, Tailwind CSS
APIs & Realtime: REST APIs, Socket.IO, WebSockets
State Management & Data: Redux Toolkit, Zustand, TanStack Query, SWR, React Context
Databases: PostgreSQL, MongoDB
Tools & Platforms: Git, GitHub, Vercel, Webpack, Cloudflare, Vite, CI/CD
AI tools: Claude Code, Codex, Cursor
Testing: Jest, React Testing Library, Playwright
Performance & Accessibility: Core Web Vitals, React Profiler, WCAG

Education

Bachelor of Science in Computer Science Sep 2014 – Jun 2020

Simon Kuznets Kharkiv National University of Economics
