Frontend Engineer with 3+ years of experience building and optimizing production web applications using React, Next.js, and TypeScript. Experienced in developing complex interfaces, real-time systems, and scalable frontend architecture. Delivered measurable performance improvements, including a 40% reduction in page load time. Skilled in API integrations, state management, accessibility, and testing.

Professional Experience

Frontend Engineer | Kompot.ai - AI-powered Business Management Platform | Jan 2025 - Present

- Built a real-time notification system using Socket.IO, normalizing inbound messages across 6 channels into a deduplicated toast queue with CSS-driven interactions to avoid unnecessary re-renders or flicker.
- Improved chat module performance by centralizing data fetching and eliminating duplicate requests across components, reducing page load time by 40%.
- Owned frontend development of 4 messaging integrations (WhatsApp, Instagram, Facebook, Telegram), channel connection flows, a unified conversation interface, and AI-powered replies.
- Improved time to first usable content on the Contact page by 45% (2s to 1.1s) by replacing sequential data fetching with prioritized parallel requests and progressive rendering with loading states.
- Implemented Playwright E2E automation for the critical real-time notification flow and component tests for core notification behavior, including stacking, deduplication, and channel-specific formatting.

Frontend Engineer | A-Fix Inc. - Internal CRM platform | Jun 2023 - Dec 2024

- Streamlined application initialization by integrating a unified endpoint developed with backend engineers into a typed React Context, cutting startup API calls from 4 to 1 and enabling shared data reuse across components.
 - Built a permission-aware global quick-create system for 7 entity types, enabling record creation from any screen without context switching.
 - Standardized search across views by implementing debounced live filtering with URL synchronization, preserving search state across reloads and browser navigation.
 - Built reusable auto-save hooks with debounced localStorage persistence, state recovery, and automatic three-day expiration.
 - Improved mobile usability by replacing dense tables with responsive contact cards, implementing touch-friendly interactions and WCAG-aligned accessibility improvements.
-

Skills

Programming: JavaScript, TypeScript, SQL

Frontend: React, Next.js, HTML, CSS, Tailwind CSS

APIs & Realtime: REST APIs, Socket.IO, WebSockets

State Management & Data: Redux Toolkit, Zustand, TanStack Query, React Context

Databases: PostgreSQL, MongoDB

Tools & Platforms: Git, GitHub, GitLab, Vercel, Webpack, Cloudflare, Vite, CI/CD

Testing: Jest, React Testing Library, Playwright

Performance & Accessibility: Core Web Vitals, React Profiler, WCAG

Education

Bachelor of Science in Computer Science - Simon Kuznets Kharkiv National University of Economics - June 2020
